

System Requirements:

Operating System: Windows 7 or later (x32 or x64)

Processor:

- Intel:
 - Intel® Xeon®
 - Intel® Core™ series from sixth generation and above
 - Pentium® series from sixth generation and above
 - Celeron® series from sixth generation and above
 - Intel Atom®
- AMD:
 - Ryzen Series
 - Epyc
 - Zen

RAM: Must be 8GB or above

Storage: >450 MB available

Graphics Hardware:

- NVIDIA Graphics Series:
 - CUDA® Enabled graphics card
- AMD Graphics Series:
 - ROCm Enabled graphics card

Display Resolution: Preferibly a monitor that supports HD resolution (1920x1080)

Peripherals: Must have keyboard and mouse support!

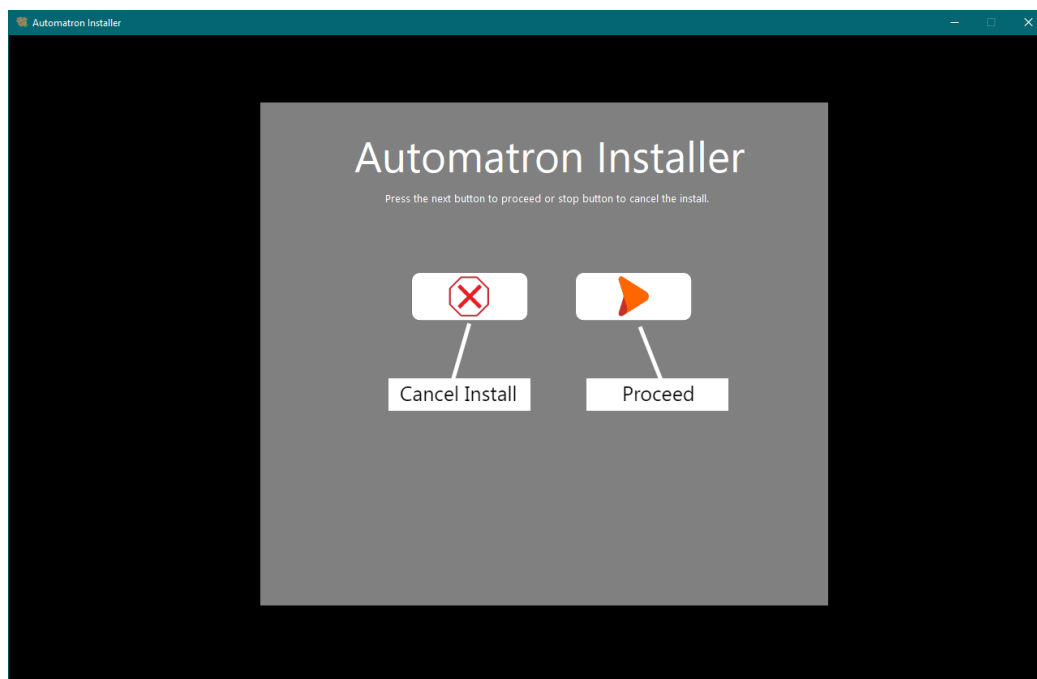

Getting Started:

Thank you for choosing GeekDictionary Software's "Automatron Interface" application. In order to get the best experience and utilize the application to its fullest potential, read this documentation carefully.

Launching the application:

When you first launch the installer, you will notice that in older versions, the Automatron application will automatically be added to the desktop. However, Automatron will not run since the installer adds the necessary information for the application to run. Without this information, you will NOT be able to utilize the fundamental features of Automatron. In newer versions of the application (latest release), the initial application dropping to the desktop will not happen.

You first need to press the orange arrow button to proceed to installation. You have the option to also cancel the installer as you please with the cancel install button (stop button). Refer to the image below:

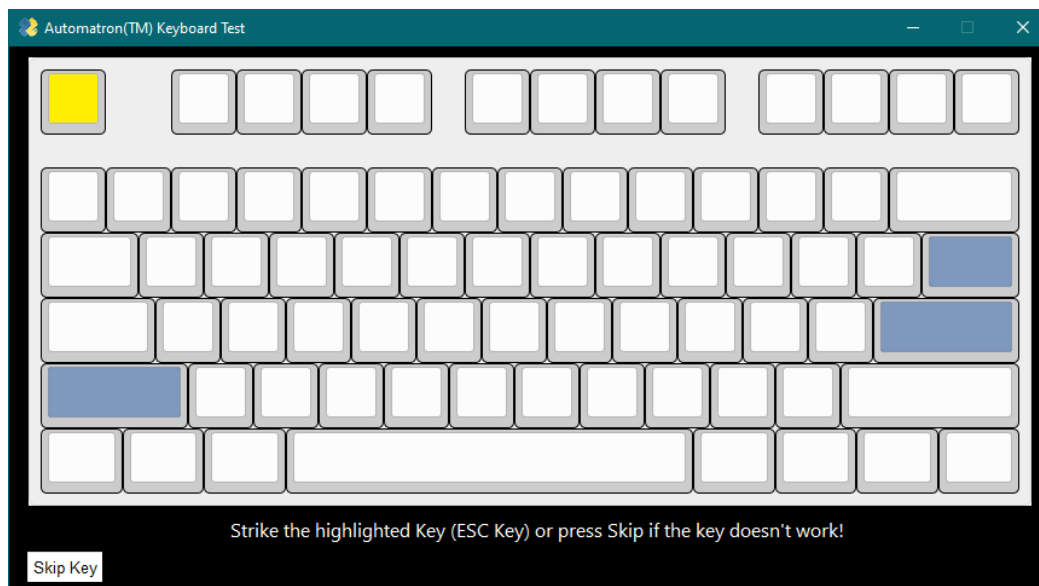

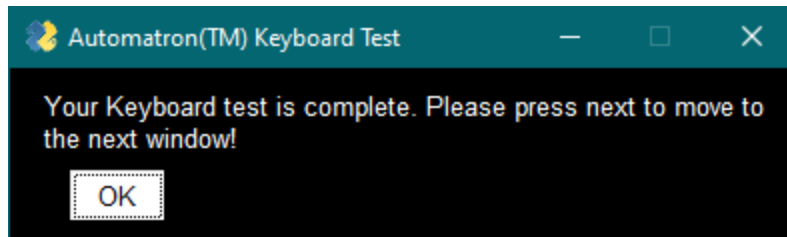

Next, you will need to include the necessary information through the installer by proceeding to each window. Please make sure the information is accurate since the system relies on your input to make your experience personalized and tailored to your needs.

Once you have went through the installer and entered your information. Automatron will present a review information window to make any modifications to your input as needed.

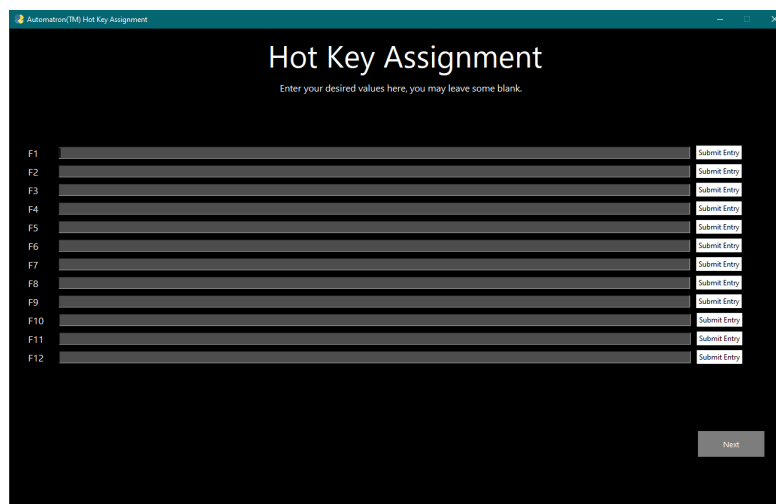

After checking your information if it is accurate, Automatron will perform a network connectivity check (broadband test) to see if you have an active internet connection since the application needs to download data from our servers. Once Automatron successfully shows your network connection is applicable for install, you may press okay and wait for the installer. Note, the application may seem like it quit; however, the application is doing background processes that can take approximately 2-3 minutes depending on each system and network broadband.

You should see the following window below this paragraph, which determines that the install successfully completed and is ready to test your keyboard. Note: You have a skip key button option if one of your keys is not functioning properly. For the last row, you will need to press skip key repeatedly until the following dialogue appears. (Next Page)

Press okay to press the next button, which will redirect you to the next window, which is keyboard input. From here, you can customize phrases/words/sentences to use in your application by typing in the associated box with that function key and pressing the “Submit Entry” key. You also have the option to set up your hot keys as preferred later. Refer to the image below:

Once you have made your changes, press the next button to quit the installer. To launch your application, press the “Automatron Interface” shortcut on your desktop.

For any questions and/or concerns about the application, fill out the following form here: <https://forms.gle/DT79xvuTMExp8McS6>

Again, thank you for installing Automatron™ Interface and I hope you will support me in the future as I continue to make powerful, robust applications needed for today's world. — Alen Jo (Owner/Founder of GeekDictionary Software)
